NIKSUN IntelliNetVCR is the world’s first full-function appliance for advanced real-time network, service, and application performance monitoring that provides zero-loss packet capture not impacted by other processes. IntelliNetVCR intelligently integrates vital management functions into a single scalable platform to facilitate:

» Executive dashboards and comprehensive reports
» Proactive end-to-end SLA/QoS monitoring and surveillance
» Continuous, interactive analysis from link to application
» Multi-timescale analysis (sub-milliseconds to months)
» Real-time and historical expert analysis
» Multi-timescale ad-hoc and scheduled reporting (sub-milliseconds to months)

Network and Application Performance Monitoring

Providing 100% visibility into infrastructure in multiple timeframes (from sub-milliseconds to months), NIKSUN IntelliNetVCR recognizes a multitude of protocols and applications for proactive discovery, classification, correlation, and real-time analysis with just a few mouse clicks!

NIKSUN IntelliNetVCR provides a wide array of benefits including:

» Remote & branch office high-availability, robust QoS metrics ideal for departmental level monitoring
» Lightweight, small, and portable solution ideal for field personnel
» Traffic capture and multi-time scale analysis for scalable traffic rates
» Real-time alerts of various QoS metrics replacing manual troubleshooting processes with proactive discovery, classification, and analysis of diverse applications and protocols
» Rich Executive dashboards and comprehensive reports for automated and optimized workflows using NIKSUN NetXperts
» Network visibility for capacity planning, trending, accounting, and usage
» Awarded Common Criteria Certification by the National Information Assurance Partnership (NIAP) which is operated by the National Security Agency
» Ad-hoc and scheduled reporting on multiple timescales (subseconds to months)
» Plug-and-play device with intuitive web-based interface & role-based access control (RBAC)
» Drill down to packet-level information for granular deep-packet analysis

NIKSUN IntelliNetVCR’s consolidation of critical infrastructure and application monitoring and analysis capabilities makes it a highly valuable solution that immediately replaces multiple monitoring/troubleshooting devices and empowers enterprises with the key advantages of automation, triage, and cost-efficient instrumentation.

Proactive End-to-End SLM and QoS Monitoring

NIKSUN IntelliNetVCR continuously monitors both inbound and outbound traffic, applications, and services at real-time production traffic rates, and simultaneously captures, timestamps, and indexes full packets in the NIKSUN Network Knowledge Warehouse (NKW) for zero loss monitoring of enterprise, carrier and ISP networks and services while also generating intelligence for insightful analytics. All traffic is analyzed in real-time at line speeds and alerts...
immediately inform users of service interruptions or infrastructure/application degradation as soon as they occur. Each alert is linked to contextual analysis and corresponding packet information, giving users the option to immediately hone in to the sub-millisecond level for troubleshooting and root-cause discovery.

**Continuous, Interactive In-depth Analysis from Link to Application**

Harnessing the power of the embedded NIKSUN Network Knowledge Warehouse, NIKSUN IntelliNetVCR is an analyzer that never forgets. Users have access to a large repository of actual traffic data from sub-second levels to hours and days or even months. This allows users to “rewind” back in time to a problem event for troubleshooting and diagnosis.

With shared workspace and web-based link-to-application layer analysis, NIKSUN IntelliNetVCR allows users to collaborate across the globe to troubleshoot and diagnose past or current problems, seamlessly.

**Multi-timescale Analysis Across All OSI Layers**

NIKSUN IntelliNetVCR supports multi-timescale analysis (from sub-millisecond levels to minutes, hours, days, or even months) and multi-level drill-down (Link to Application layer), enabling users to start at a high-level view and pivot to an application and/or hosts for detection and analysis of short-lived events, that are undetectable when data is aggregated by the minute, for reduced mean-time-to-resolution (MTTR).

Bounce diagram analysis visualizing each stage of an application session facilitates even faster diagnostics.

**Real-time and Historical Expert Analysis and Performance Alarming**

Optional capabilities available via add-on NetXperts and NetSLM modules, further reduce MTTR by providing both real-time and historical advanced analysis and alarming from Link to Application layer.

**Multi-timescale Ad-hoc and Scheduled Reporting**

NIKSUN IntelliNetVCR provides highly customizable reports generated on-demand or on a predefined schedule to suit the needs of both senior management and supporting staff.

Quick, real-time operational reports spanning extremely flexible time frames of sub-milliseconds to minutes or hours or days maximizes operational efficiency, while long-term reports spanning months or even years of network history assist in strategic decision making, planning, trending, optimization, and change control.

With NIKSUN IntelliNetVCR’s unlimited storage options, it is possible to archive network information for extremely long periods of time.
