Building relationships to serve our partners

When you team with NIKSUN; you are better equipped to deliver incremental growth and revenue, as well as provide your clients with the world's leading solutions, for cyber security and network performance management. Our vision is to create a channel reseller network that brings together expertise and business relationships; serving customers in the best way possible for today, tomorrow and beyond.

It's all about providing better solutions together — leveraging NIKSUN's award winning technologies is the foundation but collaboration is our key to success.

Careers at NIKSUN

As companies have come to rely more on their networks; NIKSUN has grown exponentially to fulfill our customers' demands, for a faster and more secure network. We recognize that our employees are responsible for our leadership in the industry. NIKSUN provides a setting where you can apply your talent, and creativity in a stimulating and inclusive work environment.

Pay Scale and Other Benefit Programs

- Medical insurance
- Dental insurance
- Vision insurance
- Long-term disability insurance for employees
- Short-term disability insurance for employees
- Life insurance for employees
- Tuition reimbursement
- Vacation/sick leave - 18 days a year
- Holidays - 7 days a year
- Flexible spending account for healthcare and childcare costs

If you are a motivated, intelligent, dynamic and an ambitious professional; with a positive vision for success, NIKSUN could be the right fit for you.
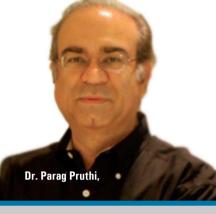

Customers:

1,000+ enterprise customers in over 30 countries including:
- Defense and intelligence communities
- Major financial institutions
- Global service providers

Qualification of the Employee

a) Intelligent
b) Self motivated
c) Sense of ownership
d) Passionate about NIKSUN

All four of these characteristics must exist for the person to be successful at NIKSUN

Mission

Niksun's mission is to empower organisations to make fast, accurate decisions that assure network service levels that meet their evolving performance, security, and data integrity compliance goals.

About Us

Key Person:

Dr. Parag Pruthi,
Founder, Chairman and CEO
Dr. Pruthi brings over twenty-five years of expertise in the network security, wireless and applications analysis industry. Pruthi is the founder of NIKSUN; which he has built from a startup to a highly successful global company. He is widely recognized as the founding father of packet capture, stream to disk, bit vacuum, and other similar technologies; which he brought to market in 1997 as NetVCR. He is also widely accepted as one of the leading innovators in the field of cyber security. In 2001; he introduced the NetDetector as the only device in the world, capable of multi gigabits per second line rate recording and simultaneous analysis, reconstruction and replay in order to discover the source of security incidents, and identification of potential information leakage. This invention led to the creation and growth of the field of network forensics.

Dr. Parag Pruthi,

NIKSUN, Inc. is a privately held multinational corporation headquartered in Princeton, New Jersey,USA, that delivers real-time, forensics-based cybersecurity and performance solutions. NIKSUN was established in 1997 by Dr. Parag Pruthi. NIKSUN products, particularly the NetDetector line of products, detect and reconstruct security breaches by storing, evaluating, and performing network intelligence on all packets moving in or out of the network. NIKSUN's NetVCR products are also used to monitor, troubleshoot, and identify network performance problems reportedly in all types of networks, such as those of Internet Service Providers and governments, down to the networks of small businesses.

NIKSUN is the leader in making the unknown known. NIKSUN delivers the best next-generation network monitoring solutions; to secure critical infrastructure, optimize service delivery, and reduce compliance risks. Based on the world's most scalable and modular technology – **Alpine** – designed specifically for large-scale network monitoring, NIKSUN is revolutionizing the network monitoring industry; with its flagship products, NetDetector®, NetVCR®, and NetOmni™. With more than 1,000 enterprise customers in over 30 countries, NIKSUN is the only network-wide monitoring company that provides organizations with the power to instantly **'Know the Unknown'**.

Product Offerings :
NIKSUN products have often been compared to security cameras; for networks in that the products are capable of viewing, recording, and storing everything that crosses a packet network, such as Internet traffic or a private LAN. By leveraging techniques and methodologies from various fields such as chaos theory, fractal analytics, data warehousing and data mining, the company has changed the way networks, applications, and services are secured and managed. Through the combination of these seemingly unrelated disciplines; NIKSUN technology has significantly increased efficiency and scalability, in the field of network analysis. NIKSUN products are all built on a single engine; that non-invasively plugs in via a Span or Port Tap, with no impact to network performance or traffic flow.

NIKSUN's first product was NetVCR, for Network Performance Management, followed by NIKSUN NetDetector, for Cyber Security.

NIKSUN states that some of the core features of their products are:
• Network security surveillance
• Mobile application security
• External and Internal Policy
  compliance verification
• Availability of network services,
  applications and underlying
  network infrastructure
• Voice and video over IP security
  and management
• Intelligent analytics
• Enterprise network visibility and
  fast incident response time
